### FOR IMMEDIATE RELEASE

#### **Moderna and Johnson & Johnson COVID-19 vaccine booster shots now available**

The Commonwealth Healthcare Corporation (CHCC) and the Governor's COVID-19 Task Force, with guidance from the U.S. Department of Health and Human Services, the Centers for Disease Control and Prevention (CDC), and the Food and Drug Administration, will be offering Moderna COVID-19 vaccine booster shots to the following individuals at least six months after their initial series: 65 years and older; 18 years and older who have underlying medical conditions; and 18 years and older who work or live in high-risk settings.

Johnson & Johnson/Janssen COVID-19 vaccine booster shots are also available to individuals aged 18 or older, at least two months after their initial shot.

Individuals can obtain a booster shot by walking into the COVID-19 mass vaccination site (i.e., Multi-Purpose Center), through the CHCC Immunization Clinic, and requesting a booster dose of either Pfizer-BioNTech, Moderna, or Johnson & Johnson vaccines.

All interested individuals, including patients on Tinian and Rota, can call the CHCC call center at (670) 682-SHOT (7468) for more information on the availability of a COVID-19 vaccine booster shot.

Consent forms must be completed by patients at the time of vaccination for the booster shot. The consent forms will include a section in which the patient/vaccine recipient will self-attest to qualifying under any of the aforementioned categories and that they have already received their initial dose of a COVID-19 vaccine.

There are now booster recommendations for all three available COVID-19 vaccines. Eligible individuals may choose which vaccine they receive as a booster dose. Some people may have a preference for the vaccine type that they originally received, and others may prefer to get a different booster. CDC's recommendations now allow for this type of mix and match dosing for booster shots.

Data show that all three of the COVID-19 vaccines approved or authorized in the United States [continue to be highly effective](#) in reducing risk of severe disease, hospitalization, and death.

Vaccination remains the best way to protect yourself and reduce the spread of the virus, and help prevent new variants from emerging. Individuals who have questions should talk to their health care provider about their medical condition and whether getting a booster shot is appropriate for them.
