ALERTS AND TRENDS

ILI: Decrease from previous week

DIA: Increase from previous week

PF: Increase from previous week

AFR: Stable from previous week

KEY TAKEAWAYS

- 64% Increase in Diarrhea cases were seen this Epi Week (#20) compared to the average of the previous 3 Epi Weeks (#19, 18, & 17).
- 13% Increase in Prolonged Fever cases were seen this Epi Week (#20) compared to the average of the previous 3 Epi Weeks (#19, 18, & 17).
- 5% Decrease in Influenza Like Illness cases were seen this Epi Week (#20) compared to the average of the previous 3 Epi Weeks (#19, 18, & 17).

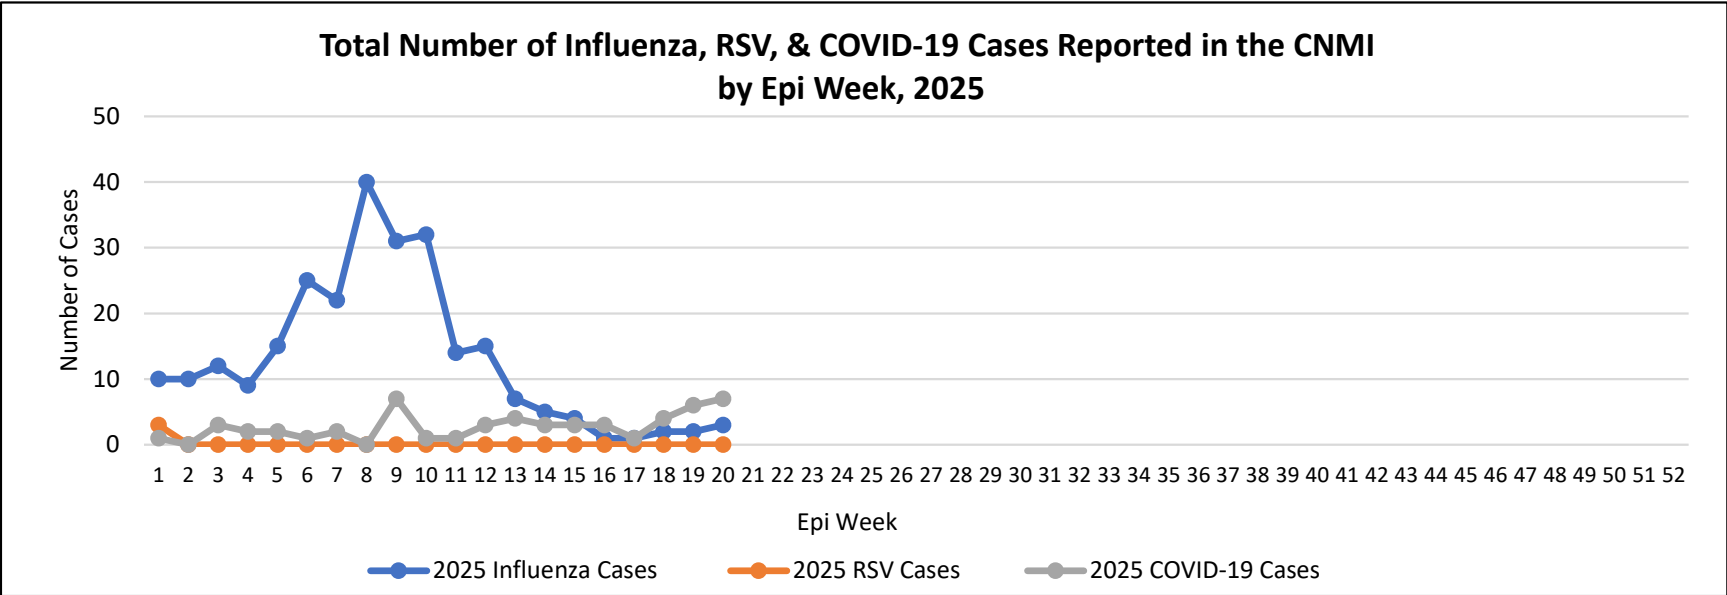

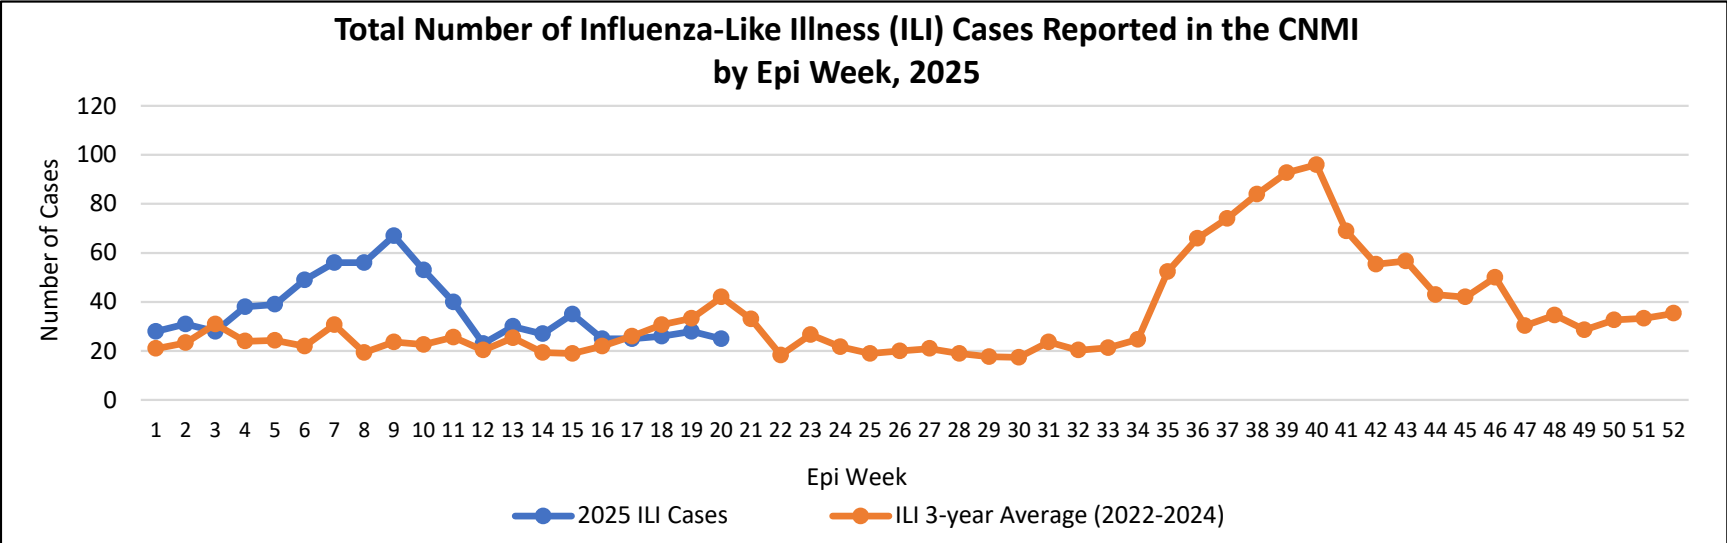

❖ 3 Influenza cases:

❖ 3 Flu A

Syndromes	Epi Week				Percent (%) change from current week to previous 3 weeks	Antimicrobial Resistant (AMR) Infections		
	20	19	18	17		Organism	EW 20	2025 YTD Totals
Influenza-Like Illness	25	28	26	25	-5%	MRSA	0	23
Diarrhea	24	13	16	15	64%	VRE	0	2
Prolonged Fever	18	13	17	18	13%	ESBL	1	49
Acute Fever and Rash	0	0	0	0	0%	CRE	0	0

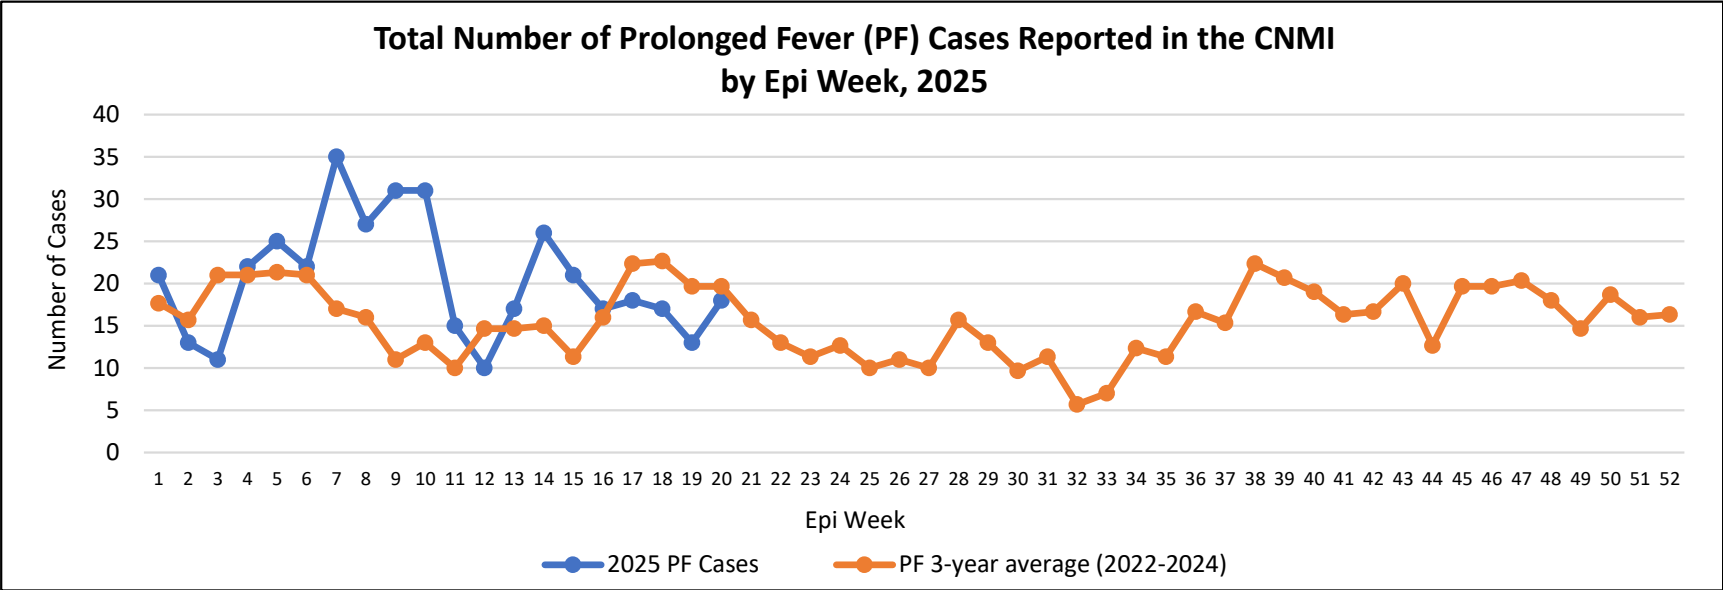

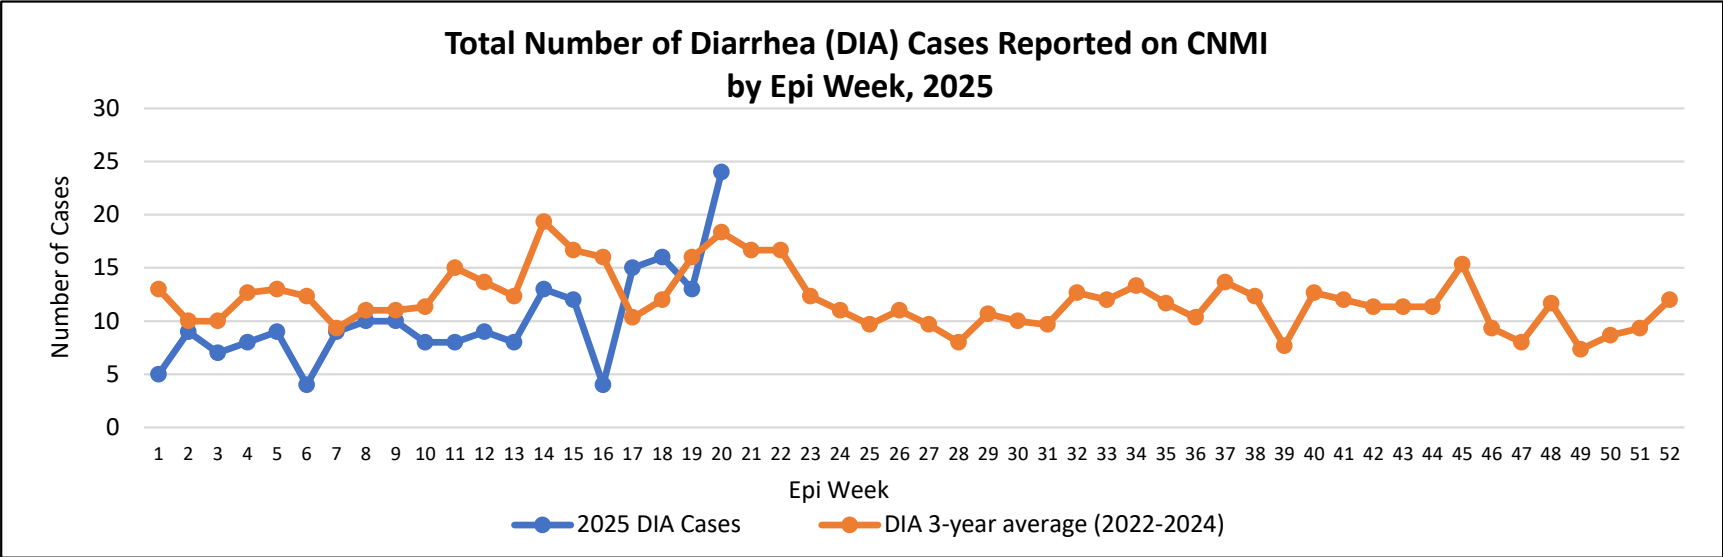

CNMI Weekly Syndromic Surveillance Trends

CNMI Weekly Syndromic Surveillance Trends

EPI WEEK 20      EPI WEEK DATE: May 11, 2025 – May 17, 2025

CNMI Weekly Notifiable Disease Report for Select NNDs

EPI WEEK 20 EPI WEEK DATE: May 11, 2025 – May 17, 2025

In the table below, weekly and year to date counts are displayed for Epi Week 20 and 2025, respectively. Additionally, a 3-year weekly average is calculated for the same Epi Week from the previous 3 years (2022-2024) for comparison to the current week. Incidence rates are calculated for 2024 and 2025 using the estimated population for the CNMI from the U.S. Census Bureau.

Condition	Epi Week 20	2025 YTD	3-year weekly average counts	2025 YTD Incidence Rates*	2024 Incidence Rates*
<b>Enteric Diseases:</b>					
Campylobacter	1	5	0	9.8	35.2
Ciguatera fish poisoning	0	2	0	3.9	9.8
Salmonella	0	4	1	7.9	43.0
<b>Environmental:</b>					
Elevated Blood Lead Levels	0	0	0	0.0	7.8
<b>Sexually Transmitted Infections:</b>					
Chlamydia	1	89	5	174.7	418.6
Gonorrhea	1	10	0	19.6	48.9
Syphilis	0	1	0	2.0	5.9
<b>Respiratory Infections:</b>					
Influenza	3	260	-	510.3	831.4
RSV	0	3	-	5.9	142.8
COVID-19	7	54	16	106.0	1299.0
<b>Tuberculosis:</b>					
TB, Confirmed	0	6	0	11.8	19.6
TB, Under Investigation	1	2	0	3.9	7.8

\*Rate per 100,000; Data are preliminary and subject to change. CNMI population estimates were determined using 2024 and 2025 Census International Database ([https://www.census.gov/data-tools/demo/idb/#/country?YR\\_ANIM=2021&COUNTRY\\_YR\\_ANIM=2021&FIPS\\_SINGLE=CQ](https://www.census.gov/data-tools/demo/idb/#/country?YR_ANIM=2021&COUNTRY_YR_ANIM=2021&FIPS_SINGLE=CQ))

CNMI Weekly Prescription Drug Monitoring Program (PDMP) Report

EPI WEEK 20 | EPI WEEK DATE: MAY 11 – MAY 17, 2025

WEEKLY CASE COUNTS											
POLYSUBSTANCE		OPIOID			STIMULANT			BENZODIAZEPINE			OTHER SUBSTANCE
OVERDOSE	MISUSE	OVERDOSE	ODU	MISUSE	OVERDOSE	StUD	MISUSE	OVERDOSE	BUD	MISUSE	OVERDOSE
0	0	0	0	0	0	0	4	0	0	0	1

NOTE: The encounters have been monitored since 2020. Some individuals might be involved in multiple cases or flagged multiple times for the same type of encounter in a single EPI week. The overdose Surveillance has expanded to include Stimulant and Polysubstance cases in 2021, Benzodiazepine cases in 2022. The Polysubstance cases are also counted under respective categories. Prior cases of any overdose related encounters might be duplicated under Other Substance Overdose category. Other Substance category analysis is solely depending on indications from the providers' notes. The substances reported are not verified by NDC number or DEA substance database.

PDMP IDENTIFIED CASES:  
NUMBER OF PATIENT/ENCOUNTER FLAGGED by EPI WEEK 2025

- FATAL OVERDOSE
- NON-FATAL OVERDOSE
- SUBSTANCE USE DISORDER or MISUSE

CASE: DEFINITION	
OVERDOSE	Injury to the body (poisoning) that happens when a drug is taken in excessive amounts. An overdose can be fatal or nonfatal, accidental or intentional.
POLY-SUBSTANCE	The use of more than one drug, also known as polysubstance use, is common. This includes when two or more are taken together or within a short time period, either intentionally or unintentionally. Intentional polysubstance use occurs when a person takes a drug to increase or decrease the effects of a different drug or wants to experience the effects of the combination. Unintentional polysubstance use occurs when a person takes drugs that have been mixed or cut with other substances, like fentanyl, without their knowledge. Whether intentional or not, mixing drugs is never safe because the effects from combining drugs may be stronger and more unpredictable than one drug alone, and even deadly. *For overdose Surveillance, Poly-Substance Use only includes encounters associated with Opioids, Stimulants, and/or Benzodiazepines.
MISUSE	The use of illegal drugs and/or the use of prescription drugs in a manner other than as directed by a doctor, such as use in greater amounts, more often, or longer than told to take a drug or using someone else's prescription.
OPIOID USE DISORDER	A problematic pattern of opioid, stimulant, or benzodiazepine uses that lead to serious impairment or distress. Diagnosing OUD/SUD/BUD requires a thorough evaluation, which may include obtaining the results of urine drug testing and prescription drug monitoring program (PDMP) reports, when OUD/SUD/BUD is suspected. A diagnosis is based on specific criteria such as unsuccessful efforts to cut down or control use, or use resulting in social problems and a failure to fulfill obligations at work, school, or home, among other criteria.
STIMULANT USE DISORDER	
BENZODIAZEPINE USE DISORDER	
SUSPECTED MISUSE	Any encounters that possibly leading to the above descriptions with such providers' comments as "requesting prescription refills (at emergency department)", "drug-seeking-behavior", and "frequent ER visitor for the same complaint for chronic pain and requesting 'stronger' medication". Also, cases where providers indicate there is possibility for misuse on the EHR system or when patients inform that they took Oxycodone (for example) and no PDMP data to support the patients' statement.
