### KEY TAKEAWAYS

- 1% Decrease in Total Encounters** from the last epi week to the current epi week.
- 33% Decrease in COVID-19 cases** were seen this epi week (#34) compared to the average of the previous 3 epi weeks (#33, 32, & 31).
- 62% Increase in Influenza-like cases** were seen this epi week (#34) compared to the average of the previous 3 epi weeks (#33, 32, & 31).

### Total Number of Prolonged Fever Cases Reported at CNMI Sentinel Sites by Epi Week, 2022

### ALERTS AND TRENDS

- ILI:** Increase from previous week
- PF:** Increase from previous week
- AFR:** Stable from previous week
- DIA:** Increase from previous week

| Syndromes              | Epi Week |    |    |    | % Change from current week to previous 3 weeks | COVID Hospitalizations      |        |

## CNMI Weekly OD2A Surveillance Report

EPI WEEK34 | EPI WEEK DATE: AUGUST 21 – AUGUST 27, 2022

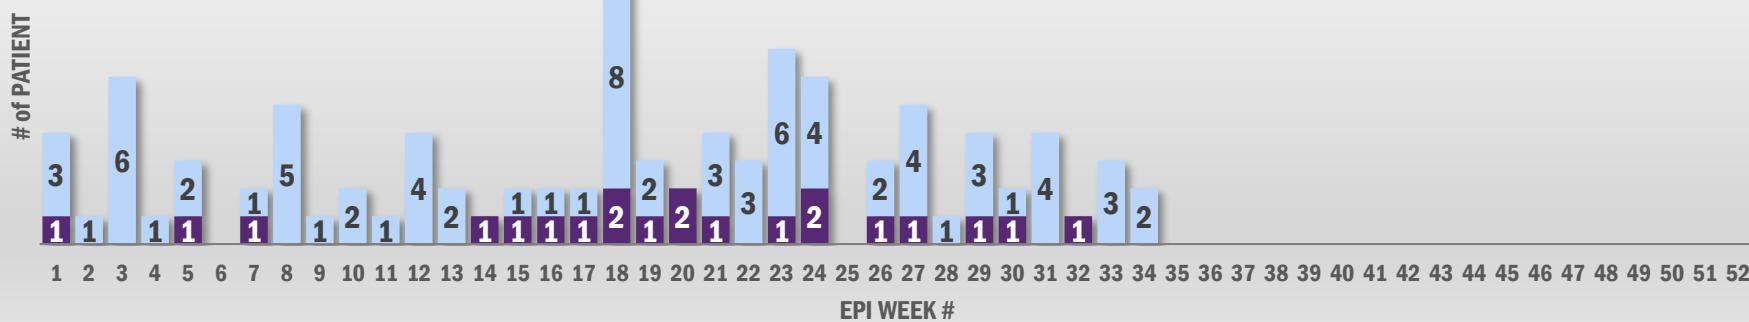

### WEEKLY CASE COUNTS

| POLY SUBSTANCE |        | OPIOID   |     |        | STIMULANT |     |        | BENZODIAZEPINE |     |        | OTHER SUBSTANCE |
|----------------|--------|----------|-----|--------|-----------|-----|--------|----------------|-----|--------|-----------------|
| OVERDOSE       | MISUSE | OVERDOSE | OUD | MISUSE | OVERDOSE  | SUD | MISUSE | OVERDOSE       | BUD | MISUSE | OVERDOSE        |
| 0              | 3      | 0        | 0   | 1      | 0         | 0   | 0      | 0              | 1   | 2      | 0               |

NOTE: The encounters have been monitored since 2020. Some individuals might be involved in multiple cases or flagged multiple times for the same type of encounter in a single EPI week. The OD2A Surveillance has expanded to include Stimulant and Poly Substance cases in 2021, Benzodiazepine cases in 2022. The Poly Substance cases are also counted under respective categories. Prior cases of these overdose might be duplicated under Other Substance Overdose category.

### OD2A SURVEILLANCE: PATIENT by EPI WEEK 2022

- FATAL OVERDOSE
- NON-FATAL OVERDOSE
- SUBSTANCE USE DISORDER or MISUSE

| CASE DEFINITION             |  |
|-----------------------------|--|
| OVERDOSE                    | Injury to the body (poisoning) that happens when a drug is taken in excessive amounts. An overdose can be fatal or nonfatal, accidental or intentional.  |
| POLY-SUBSTANCE              | The use of more than one drug, also known as polysubstance use, is common. This includes when two or more are taken together or within a short time period, either intentionally or unintentionally. Intentional polysubstance use occurs when a person takes a drug to increase or decrease the effects of a different drug or wants to experience the effects of the combination. Unintentional polysubstance use occurs when a person takes drugs that have been mixed or cut with other substances, like fentanyl, without their knowledge. Whether intentional or not, mixing drugs is never safe because the effects from combining drugs may be stronger and more unpredictable than one drug alone, and even deadly. |
| MISUSE                      | *For OD2A Surveillance, Poly-Substance Use only includes encounters associated with Opioids, Stimulants, and/or Benzodiazepines.   |
| OPIOID USE DISORDER         | The use of illegal drugs and/or the use of prescription drugs in a manner other than as directed by a doctor, such as use in greater amounts, more often, or longer than told to take a drug or using someone else's prescription.   |
| STIMULANT USE DISORDER      | A problematic pattern of opioid, stimulant, or benzodiazepine uses that lead to serious impairment or distress. Diagnosing OUD/SUD/BUD requires a thorough evaluation, which may include obtaining the results of urine drug testing and prescription drug monitoring program (PDMP) reports, when OUD/SUD/BUD is suspected. A diagnosis is based on specific criteria such as unsuccessful efforts to cut down or control use, or use resulting in social problems and a failure to fulfill obligations at work, school, or home, among other criteria.   |
| BENZODIAZEPINE USE DISORDER | Any encounters that possibly leading to the above descriptions with such providers' comments as "requesting prescription refills (at emergency department)", "drug-seeking behavior", and "frequent ER visitor for the same complaint for chronic pain and requesting 'stronger' medication". Also, cases where providers indicate there is possibility for misuse on the EHR system or when patients inform that they took Oxycodone (for example) and no PDMP data to support the patients' statement.   |
| SUSPECTED MISUSE            |  |

## CNMI Weekly Notifiable Disease Report

EPI WEEK 34

EPI WEEK DATE: August 21 - August 27, 2022

In the table below, weekly and year to date counts are displayed through epi week 34. Additionally, a 3-year weekly average of incident counts comparing the incident count for this time period to the average of the previous 3 years (2019-2021) is included as well as incident rates for conditions that have counts greater than 20. Rates cannot be calculated for counts less than 20 due to statistical unreliability.

| Condition                   | Epi Week 34 | 2022 YTD | 3-year weekly average incident counts | 2022 YTD Incident Rate* | 2021 Incident Rate* |
|-----------------------------|-------------|----------|---------------------------------------|-------------------------|---------------------|
| <b>Enteric</b>              |             |          |                                       |                         |                     |
| Campylobacter               | 3           | 21       | 0                                     | 44.4                    | 29.6                |
| Ciguatera fish poisoning    | 0           | 2        | 1                                     | 4.2                     | 33.8                |
| Salmonella                  | 0           | 13       | 0                                     | 27.5                    | 25.4                |
| <b>Environmental</b>        |             |          |                                       |                         |                     |
| Elevated Blood Lead Levels  | 0           | 5        | 0                                     | 10.6                    | 31.7                |
| <b>Sexually Transmitted</b> |             |          |                                       |                         |                     |
| Chlamydia                   | 5           | 138      | 3                                     | 291.6                   | 437.4               |
