## CNMI Weekly OD2A Surveillance Report

EPI WEEK 37 | EPI WEEK DATE: SEPTEMBER 11 - SEPTEMBER 17, 2022

### WEEKLY CASE COUNTS

POLY SUBSTANCE		OPIOID			STIMULANT			BENZODIAZEPINE			OTHER SUBSTANCE
OVERDOSE	MISUSE	OVERDOSE	OUD	MISUSE	OVERDOSE	SUD	MISUSE	OVERDOSE	BUD	MISUSE	OVERDOSE
1	0	0	0	1	0	0	0	1	0	0	1

NOTE: The encounters have been monitored since 2020. Some individuals might be involved in multiple cases or flagged multiple times for the same type of encounter in a single EPI week. The OD2A Surveillance has expanded to include Stimulant and Poly Substance cases in 2021, Benzodiazepine cases in 2022. The Poly Substance cases are also counted under respective categories. Prior cases of these overdose might be duplicated under Other Substance Overdose category.

### OD2A SURVEILLANCE: PATIENT by EPI WEEK 2022

- FATAL OVERDOSE
- NON-FATAL OVERDOSE
- SUBSTANCE USE DISORDER or MISUSE

#### CASE DEFINITION

OVERDOSE	Injury to the body (poisoning) that happens when a drug is taken in excessive amounts. An overdose can be fatal or nonfatal, accidental or intentional.
POLY-SUBSTANCE	The use of more than one drug, also known as polysubstance use, is common. This includes when two or more are taken together or within a short time period, either intentionally or unintentionally. Intentional polysubstance use occurs when a person takes a drug to increase or decrease the effects of a different drug or wants to experience the effects of the combination. Unintentional polysubstance use occurs when a person takes drugs that have been mixed or cut with other substances, like fentanyl, without their knowledge. Whether intentional or not, mixing drugs is never safe because the effects from combining drugs may be stronger and more unpredictable than one drug alone, and even deadly.
MISUSE	The use of illegal drugs and/or the use of prescription drugs in a manner other than as directed by a doctor, such as use in greater amounts, more often, or longer than told to take a drug or using someone else's prescription.
OPIOID USE DISORDER	A problematic pattern of opioid, stimulant, or benzodiazepine uses that lead to serious impairment or distress. Diagnosing OUD/SUD/BUD requires a thorough evaluation, which may include obtaining the results of urine drug testing and prescription drug monitoring program (PDMP) reports, when OUD/SUD/BUD is suspected. A diagnosis is based on specific criteria such as unsuccessful efforts to cut down or control use, or use resulting in social problems and a failure to fulfill obligations at work, school, or home, among other criteria.
STIMULANT USE DISORDER	
BENZODIAZEPINE USE DISORDER	
SUSPECTED MISUSE	Any encounters that possibly leading to the above descriptions with such providers' comments as "requesting prescription refills (at emergency department)", "drug-seeking behavior", and "frequent ER visitor for the same complaint for chronic pain and requesting 'stronger' medication". Also, cases where providers indicate there is possibility for misuse on the EHR system or when patients inform that they took Oxycodone (for example) and no PDMP data to support the patients' statement.

## CNMI Weekly Notifiable Disease Report

EPI WEEK 37

EPI WEEK DATE: September 11 - September 17, 2022

In the table below, weekly and year to date counts are displayed through epi week 37. Additionally, a 3-year weekly average of incident counts comparing the incident count for this time period to the average of the previous 3 years (2019-2021) is included as well as incident rates for conditions that have counts greater than 20. Rates cannot be calculated for counts less than 20 due to statistical unreliability.
