## CNMI Weekly Syndromic Surveillance Report

EPI WEEK 06

EPI WEEK DATE: February 05 - February 11, 2023

Clinic	Influenza-Like-Illness (ILI)		Diarrhea (DIA)		Prolonged Fever (PF)		Acute Fever and Rash (AFR)		Total Encounters	
	Last week	Current week	Last week	Current week	Last week	Current week	Last week	Current week	Last week	Current week
CHCC Family Care Clinic	2	0	3	3	2	0	0	0	453	424
CHCC Women's Clinic	0	0	0	0	0	0	0	0	107	124
CHCC Children's Clinic	4	15	4	1	2	4	0	0	294	288
CHCC Emergency Room	29	20	12	16	7	6	0	0	455	502
Kagman Isla Community Health	2	0	0	0	0	0	0	0	227	221
Tinian Isla Community Health	0	0	0	0	0	0	0	0	35	36
CHCC Tinian Health Center	2	4	0	0	0	0	0	0	104	100
CHCC Rota Health Center	1	0	2	1	0	0	0	0	93	110
	40	39	21	21	11	10	0	0	1768	1805

### Total Number of Influenza-like Illness (ILI) Cases Reported in the CNMI by Epi Week, 2023

### KEY TAKEAWAYS

- 2% Increase in Total Encounters from the last epi week to the current epi week.
- 31% Increase in Diarrhea cases were seen this epi week (#06) compared to the average of the previous 3 epi weeks (#05, 04, & 03).
- 13% Increase in Influenza-like cases were seen this epi week (#06) compared to the average of the previous 3 epi weeks (#05, 04, & 03).
  - 8 Influenza cases
  - 27 COVID-19 cases

### ALERTS AND TRENDS

- IL: Stable from previous week
- PF: Stable from previous week
- AFR: Stable from previous week
- DIA: Stable from previous week

Syndromes	Epi Week				% Change from current week to previous 3 weeks	COVID Hospitalizations		
	06	05	04	03		Date Range	Totals	
Acute Fever and Rash	0	0	0	0	Unstable		February 05 – February 11, 2023	0
Prolonged fever	10	11	7	10	7%		January 29 – February 04, 2023	3
Influenza-like illness	39	40	25	39	13%		11/09/2021 – 02/11/2023	290
Diarrhea	21	21	15	12	31%

## CNMI Weekly OD2A Surveillance Report

EPI WEEK 6 | EPI WEEK DATE: FEBRUARY 5 – FEBRUARY 11, 2023

### WEEKLY CASE COUNTS

POLYSUBSTANCE		OPIOID			STIMULANT			BENZODIAZEPINE			OTHER SUBSTANCE
OVERDOSE	MISUSE	OVERDOSE	OUD	MISUSE	OVERDOSE	SUD	MISUSE	OVERDOSE	BUD	MISUSE	OVERDOSE
1	1	0	0	1	0	0	3	1	0	0	2

NOTE: The encounters have been monitored since 2020. Some individuals might be involved in multiple cases or flagged multiple times for the same type of encounter in a single EPI week. The OD2A Surveillance has expanded to include Stimulant and Polysubstance cases in 2021, Benzodiazepine cases in 2022. The Polysubstance cases are also counted under respective categories. Prior cases of any overdose related encounters might be duplicated under Other Substance Overdose category. Other Substance category analysis is solely depending on indications from the providers' notes. The substances reported are not verified by NDC number or DEA substance database.

### OD2A SURVEILLANCE:

NUMBER OF PATIENT/ENCOUNTER FLAGGED by EPI WEEK 2023

- FATAL OVERDOSE
- NON-FATAL OVERDOSE
- SUBSTANCE USE DISORDER or MISUSE

EPI WEEK #

#### CASE: DEFINITION

OVERDOSE	Injury to the body (poisoning) that happens when a drug is taken in excessive amounts. An overdose can be fatal or nonfatal, accidental or intentional.
POLY-SUBSTANCE	The use of more than one drug, also known as polysubstance use, is common. This includes when two or more are taken together or within a short time period, either intentionally or unintentionally. Intentional polysubstance use occurs when a person takes a drug to increase or decrease the effects of a different drug or wants to experience the effects of the combination. Unintentional polysubstance use occurs when a person takes drugs that have been mixed or cut with other substances, like fentanyl, without their knowledge. Whether intentional or not, mixing drugs is never safe because the effects from combining drugs may be stronger and more unpredictable than one drug alone, and even deadly. *For OD2A Surveillance, Poly-Substance Use only includes encounters associated with Opioids, Stimulants, and/or Benzodiazepines.
MISUSE	The use of illegal drugs and/or the use of prescription drugs in a manner other than as directed by a doctor, such as use in greater amounts, more often, or longer than told to take a drug or using someone else's prescription.
OPIOID USE DISORDER	A problematic pattern of opioid, stimulant, or benzodiazepine uses that lead to serious impairment or distress. Diagnosing OUD/SUD/BUD requires a thorough evaluation, which may include obtaining the results of urine drug testing and prescription drug monitoring program (PDMP) reports, when OUD/SUD/BUD is suspected. A diagnosis is based on specific criteria such as unsuccessful efforts to cut down or control use, or use resulting in social problems and a failure to fulfill obligations at work, school, or home, among other criteria.
STIMULANT USE DISORDER	
BENZODIAZEPINE USE DISORDER	
SUSPECTED MISUSE	Any encounters that possibly lead to the above descriptions with such providers' comments as "requesting prescription refills (at emergency department)", "drug-seeking behavior", and "frequent ER visitor for the same complaint for chronic pain and requesting 'stronger' medication". Also, cases where providers indicate there is possibility for misuse on the EHR system or when patients inform that they took Oxycodone (for example) and no PDMP data to support the patients' statement.

#### SENTINEL SITES

**Commonwealth Healthcare Corporation (CHCC)**

## CNMI Weekly Notifiable Disease Report

EPI WEEK 06

EPI WEEK DATE: February 05 – February 11, 2023

In the table below, weekly and year to date counts are displayed through epi week 06. Additionally, a 3-year weekly average of incident counts comparing the incident count for this time period to the average of the previous 3 years (2020-2022) is included as well as incident rates for conditions that have counts greater than 20. Rates cannot be calculated for counts less than 20 due to statistical unreliability.

Condition	Epi Week 06	2023 YTD	3-year weekly average incident counts	2023 YTD Incident Rate*	2022 Incident Rate*
<b>Enteric</b>					
Campylobacter	0	3	0	5.8	81.6
Ciguatera fish poisoning	0	0	0	0.0	7.8
Salmonella	0	6	0	11.7	44.7
<b>Environmental</b>					
Elevated Blood Lead Levels	0	0	0	0.0	9.7
<b>Sexually Transmitted</b>					
Chlamydia	10	27	4	52.6	423.5
Gonorrhea	1	8	0	15.6	33.0
Syphilis	0	1	0	1.9	5.8
<b>Respiratory</b>					
COVID-19	27	232	359	452.3	19061.7
Post-Vaccine	23	171	285	333.4	12594.5
<b>Tuberculosis</b>					
TB, Confirmed	0	0	0	0.0	11.7
TB, Under Investigation	3	6	0.3	11.7	50.5

\*Rate per 100,000; Data are preliminary and subject to change. CNMI population estimates were determined using 2021 & 2022 Census International Database ([https://www.census.gov/data-tools/demo/idb/#/country?YR\\_ANIM=2021&COUNTRY\\_YR\\_ANIM=2021&FIPS\\_SINGLE=CO](https://www.census.gov/data-tools/demo/idb/#/country?YR_ANIM=2021&COUNTRY_YR_ANIM=2021&FIPS_SINGLE=CO))

## CNMI Weekly Health & Vital Statistics Report

REPORTING PERIOD: EPI YEAR 2023 as of EPI WEEK 06

The statistics on births, deaths, and causes of deaths in this report are derived from birth and death registrations processed daily at the Health and Vital Statistics Office.

### Disease-specific causes of death by sex, January 1 - February 11, 2023

<sup>4</sup> Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified; <sup>5</sup> Mental, Behavioral and Neurodevelopmental disorders; <sup>6</sup> Congenital malformations, deformations and chromosomal abnormalities; <sup>7</sup> Injury, poisoning and certain other consequences of external causes; <sup>8</sup> Diseases of the musculoskeletal system and connective tissue.

### Vital events reported, January 1 - February 11, 2023
