	37	40	5	6	20	30	0	0	1279	1402

KEY TAKEAWAYS

- **10% Increase in Total Encounters** from the last Epi Week to the current Epi Week.
- **10% Increase in Influenza Like Illness cases** were seen this Epi Week (#50) compared to the average of the previous 3 Epi Weeks (#49, 48, & 47).
- **27% Increase in Prolonged Fever cases** were seen this Epi Week (#50) compared to the average of the previous 3 Epi Weeks (#49, 48, & 47).
 - 9 Influenza cases:
2 Flu A&B / 7 Flu A
 - 0 COVID-19 case

Total Number of Influenza-like Illness (ILI) Cases Reported in the CNMI by Epi Week, 2023

ALERTS AND TRENDS

- IL: Increase from previous week
- PF: Increase from previous week
- AFR: Stable from previous week
- DIA: Increase from previous week

Syndromes	Epi Week				% Change from current week to previous 3 weeks	COVID Hospitalizations	
	50	49	48	47		Date Range	Totals
Acute Fever and Rash	0	0	0	0	0%	December 10, – December 16, 2023	0
Prolonged fever	30	20	22	29	27%	December 03, – December 09, 2023	0
Influenza-like illness	40	37	40	32	10%	11/09/2021 – 12/16/2023	315
Diarrhea	6	5	11	6	-18%

CNMI Weekly Prescription Drug Monitoring Program (PDMP) Report

EPI WEEK 50 | EPI WEEK DATE: DECEMBER 10 – DECEMBER 16, 2023

WEEKLY CASE COUNTS

POLYSUBSTANCE		OPIOID			STIMULANT			BENZODIAZEPINE			OTHER SUBSTANCE
OVERDOSE	MISUSE	OVERDOSE	OUD	MISUSE	OVERDOSE	StUD	MISUSE	OVERDOSE	BUD	MISUSE	OVERDOSE
1	1	1	0	0	0	0	1	0	0	0	0

NOTE: The encounters have been monitored since 2020. Some individuals might be involved in multiple cases or flagged multiple times for the same type of encounter in a single EPI week. The overdose Surveillance has expanded to include Stimulant and Polysubstance cases in 2021, Benzodiazepine cases in 2022. The Polysubstance cases are also counted under respective categories. Prior cases of any overdose related encounters might be duplicated under Other Substance Overdose category. Other Substance category analysis is solely depending on indications from the providers' notes. The substances reported are not verified by NDC number or DEA substance database.

PDMP IDENTIFIED CASES:

NUMBER OF PATIENT/ENCOUNTER FLAGGED by EPI WEEK 2023

- FATAL OVERDOSE
- NON-FATAL OVERDOSE
- SUBSTANCE USE DISORDER or MISUSE

CASE: DEFINITION

OVERDOSE	Injury to the body (poisoning) that happens when a drug is taken in excessive amounts. An overdose can be fatal or nonfatal, accidental or intentional.
POLY-SUBSTANCE	The use of more than one drug, also known as polysubstance use, is common. This includes when two or more are taken together or within a short time period, either intentionally or unintentionally. Intentional polysubstance use occurs when a person takes a drug to increase or decrease the effects of a different drug or wants to experience the effects of the combination. Unintentional polysubstance use occurs when a person takes drugs that have been mixed or cut with other substances, like fentanyl, without their knowledge. Whether intentional or not, mixing drugs is never safe because the effects from combining drugs may be stronger and more unpredictable than one drug alone, and even deadly. *For overdose Surveillance, Poly-Substance Use only includes encounters associated with Opioids, Stimulants, and/or Benzodiazepines.
MISUSE	The use of illegal drugs and/or the use of prescription drugs in a manner other than as directed by a doctor, such as use in greater amounts, more often, or longer than told to take a drug or using someone else's prescription.
OPIOID USE DISORDER	A problematic pattern of opioid, stimulant, or benzodiazepine uses that lead to serious impairment or distress. Diagnosing OUD/SUD/BUD requires a thorough evaluation, which may include obtaining the results of urine drug testing and prescription drug monitoring program (PDMP) reports, when OUD/SUD/BUD is suspected. A diagnosis is based on specific criteria such as unsuccessful efforts to cut down or control use, or use resulting in social problems and a failure to fulfill obligations at work, school, or home, among other criteria.
STIMULANT USE DISORDER	
BENZODIAZEPINE USE DISORDER	
SUSPECTED MISUSE	Any encounters that possibly lead to the above descriptions with such providers' comments as "requesting prescription refills (at emergency department)", "drug-seeking-behavior", and "frequent ER visitor for the same complaint for chronic pain and requesting 'stronger' medication". Also, cases where providers indicate there is possibility for misuse on the EHR system or when patients inform that they took Oxycodone (for example) and no PDMP data to support the patients' statement.

CNMI Weekly Notifiable Disease Report

EPI WEEK 50

EPI WEEK DATE: December 10, – December 16, 2023

In the table below, weekly and year to date counts are displayed through Epi Week 50. Additionally, a 3-year weekly average of incident counts comparing the incident count for this time period to the average of the previous 3 years (2020-2022) is included as well as incident rates for conditions that have counts greater than 20. Rates cannot be calculated for counts less than 20 due to statistical unreliability.

Condition	Epi Week 50	2023 YTD	3-year weekly average counts	2023 YTD Incidence Rates*	2022 Incidence Rates*
Enteric					
Campylobacter	0	30	0	58.5	81.6
Ciguatera fish poisoning	0	2	0	3.9	7.8
Salmonella	0	29	0	56.5	44.7
Environmental					
Elevated Blood Lead Levels	0	4	0	7.8	9.7
Sexually Transmitted					
Chlamydia	6	219	4	426.9	423.5
Gonorrhea	1	36	1	70.2	33.0
Syphilis	0	2	0	3.9	5.8
Respiratory					
COVID-19	0	972	186	1894.9	19061.7
Post-Vaccine	0	717	114	1397.8	12594.5
Tuberculosis					
TB, Confirmed	0	14	1	27.3	44.7
TB, Under Investigation	0	29	0.2	56.5	54.4

*Rate per 100,000; Data are preliminary and subject to change. CNMI population estimates were determined using 2022 & 2023 Census International Database (https://www.census.gov/data-tools/demo/idb/#/country?YR_ANIM=2021&COUNTRY_YR_ANIM=2021&FIPS_SINGLE=CQ)
