### CNMI Weekly Syndromic Surveillance Report

EPI WEEK **47**

EPI WEEK DATE: November 17 – November 23, 2024

Clinic	Influenza-Like-Illness (ILI)		Diarrhea (DIA)		Prolonged Fever (PF)		Acute Fever and Rash (AFR)		Total Encounters	
	Last week	Current week	Last week	Current week	Last week	Current week	Last week	Current week	Last week	Current week
CHCC Family Care Clinic	1	2	0	1	0	0	0	0	253	345
CHCC Women's Clinic	0	0	0	0	0	0	0	0	112	116
CHCC Children's Clinic	16	12	1	1	8	8	0	0	188	273
CHCC Emergency Room	42	21	4	8	13	13	0	0	469	495
Kagman Isla Community Health	2	0	0	0	0	0	0	0	44	127
Tinian Isla Community Health	0	2	0	0	0	0	0	0	34	41
Southern Isla Community Health	0	2	0	0	0	0	0	0	39	96
CHCC Tinian Health Center	0	2	2	0	1	0	0	0	35	46
CHCC Rota Health Center	2	2	0	0	2	4	0	0	53	65
	<b>63</b>	<b>43</b>	<b>7</b>	<b>10</b>	<b>24</b>	<b>25</b>	<b>0</b>	<b>0</b>	<b>1227</b>	<b>1604</b>

#### KEY TAKEAWAYS

- 31% Increase in Total Encounters** from the last Epi Week to the current Epi Week.
- 18% decrease in Influenza Like Illness cases** were seen this Epi Week (#47) compared to the average of the previous 3 Epi Weeks (#46, 45, & 44).
- 9% increase in Prolonged Fever cases** were seen this Epi Week (#47) compared to the average of the previous 3 Epi Weeks (#46, 45, & 44).
  - 9 Influenza cases: 8 Flu A / 1 Flu B
  - 0 COVID-19 cases

#### Total Number of Influenza-like Illness (ILI) Cases Reported in the CNMI by Epi Week, 2024

#### ALERTS AND TRENDS

- ILI: Decrease from previous week** (Green arrow pointing down)
- PF: Increase from previous week** (Red arrow pointing up)
- AFR: Stable from previous week** (Yellow arrow pointing right)
- DIA: Increase from previous week** (Red arrow pointing up)

Syndromes	Epi Week				% Change from current week to previous 3 weeks	COVID Hospitalizations	
	47	46	45	44		Date Range	Totals
Acute Fever and Rash	0	0	0	0	0%	November 17 – November 23, 2024	0
Prolonged fever	25	24	28	17	9%	November 10 – November 16, 2024	0
Influenza-like illness	43	63	47	48	-18%	11/09/2021 – 11/23/2024	345
Diarrhea	10	7	16	14	-19%

### CNMI Weekly Prescription Drug Monitoring Program (PDMP) Report

EPI WEEK 47 | EPI WEEK DATE: NOVEMBER 17 – NOVEMBER 23, 2024

#### WEEKLY CASE COUNTS

POLYSUBSTANCE		OPIOID			STIMULANT			BENZODIAZEPINE			OTHER SUBSTANCE
OVERDOSE	MISUSE	OVERDOSE	OUD	MISUSE	OVERDOSE	StUD	MISUSE	OVERDOSE	BUD	MISUSE	OVERDOSE
0	0	0	0	0	0	0	0	0	0	0	0

NOTE: The encounters have been monitored since 2020. Some individuals might be involved in multiple cases or flagged multiple times for the same type of encounter in a single EPI week. The overdose Surveillance has expanded to include Stimulant and Polysubstance cases in 2021, Benzodiazepine cases in 2022. The Polysubstance cases are also counted under respective categories. Prior cases of any overdose related encounters might be duplicated under Other Substance Overdose category. Other Substance category analysis is solely depending on indications from the providers' notes. The substances reported are not verified by NDC number or DEA substance database.

#### PDMP IDENTIFIED CASES: NUMBER OF PATIENT/ENCOUNTER FLAGGED by EPI WEEK 2024

- FATAL OVERDOSE
- NON-FATAL OVERDOSE
- SUBSTANCE USE DISORDER or MISUSE

CASE: DEFINITION	
OVERDOSE	Injury to the body (poisoning) that happens when a drug is taken in excessive amounts. An overdose can be fatal or nonfatal, accidental or intentional.
POLY-SUBSTANCE	The use of more than one drug, also known as polysubstance use, is common. This includes when two or more are taken together or within a short time period, either intentionally or unintentionally. Intentional polysubstance use occurs when a person takes a drug to increase or decrease the effects of a different drug or wants to experience the effects of the combination. Unintentional polysubstance use occurs when a person takes drugs that have been mixed or cut with other substances, like fentanyl, without their knowledge. Whether intentional or not, mixing drugs is never safe because the effects from combining drugs may be stronger and more unpredictable than one drug alone, and even deadly.
MISUSE	The use of illegal drugs and/or the use of prescription drugs in a manner other than as directed by a doctor, such as use in greater amounts, more often, or longer than told to take a drug or using someone else's prescription.
OPIOID USE DISORDER	A problematic pattern of opioid, stimulant, or benzodiazepine uses that lead to serious impairment or distress. Diagnosing OUD/SUD/BUD requires a thorough evaluation, which may include obtaining the results of urine drug testing and prescription drug monitoring program (PDMP) reports, when OUD/SUD/BUD is suspected. A diagnosis is based on specific criteria such as unsuccessful efforts to cut down or control use, or use resulting in social problems and a failure to fulfill obligations at work, school, or home, among other criteria.
STIMULANT USE DISORDER	
BENZODIAZEPINE USE DISORDER	
SUSPECTED MISUSE	Any encounters that possibly leading to the above descriptions with such providers' comments as "requesting prescription refills (at emergency department)", "drug-seeking-behavior", and "frequent ER visitor for the same complaint for chronic pain and requesting 'stronger' medication". Also, cases where providers indicate there is possibility for misuse on the EHR system or when patients inform that they took Oxycodone (for example) and no PDMP data to support the patients' statement.

### CNMI Weekly Notifiable Disease Report

EPI WEEK 47

EPI WEEK DATE: November 17 – November 23, 2024

In the table below, weekly and year to date counts are displayed for Epi Week 47 and 2024, respectively. Additionally, a 3-year weekly average is calculated for the same Epi Week from the previous 3 years (2021-2023) for comparison to the current week. Incidence rates are calculated for 2023 and 2024 using the estimated population for the CNMI from the U.S. Census Bureau.

Condition	Epi Week 47	2024 YTD	3-year weekly average counts	2024 YTD Incidence Rates*	2023 Incidence Rates*
<b>Enteric</b>					
Campylobacter	0	17	1	33.1	58.3
Ciguatera fish poisoning	0	5	0	9.7	3.9
Salmonella	0	19	0	37.0	58.3
<b>Environmental</b>					
Elevated Blood Lead Levels	0	4	0	7.8	7.8
<b>Sexually Transmitted</b>					
Chlamydia	2	197	3	384.1	444.9
Gonorrhea	0	23	0	44.8	73.8
Syphilis	0	3	0	5.8	3.9
<b>Respiratory</b>					
COVID-19	0	660	50	1286.7	1896.1
Post-Vaccine	0	484	38	943.6	1400.7
<b>Tuberculosis</b>					
TB, Confirmed	0	7	-	13.6	42.7
TB, Under Investigation	2	5	-	-	-

\*Rate per 100,000; Data are preliminary and subject to change. CNMI population estimates were determined using 2023 Census International Database

“Post Vaccine” indicates a subset of COVID-19 cases post the recommended initial 2-series vaccine.
