ALERTS AND TRENDS

ILI: Increase from previous week

DIA: Decrease from previous week

PF: Increase from previous week

AFR: Stable from previous week

KEY TAKEAWAYS

- **A 67% Increase** in **Prolonged Fever cases** was seen this Epi Week (#44) compared with the average of the previous three Epi weeks.
- A **64% Increase** in **Influenza-Like Illness cases** was seen this Epi Week (#44) compared with the average of the previous three Epi weeks.
- A **32% Decrease** in **Diarrhea cases** was seen this Epi week (#44) compared with the average of the previous three Epi weeks.
- **2 Salmonella** & **1 Norovirus** was identified this Epi Week (#44).
- The Influenza subtyping results released on October 22, 2026, from our partners at Guam Public Health Laboratories are as follows:
  - Three (3) cases of Influenza A/H1pdm09.
  - **24 Influenza Cases:** 22 Flu A & 2 Flu A H1-2009

Syndromes	Epi Week 44	43	42	41	Percent (%) change from current week to previous 3 weeks
Influenza-Like Illness	41	28	22	25	64%
Diarrhea	10	13	18	13	-32%
Prolonged Fever	20	13	7	16	67%
Acute Fever and Rash	1	0	0	3	*Unstable due to low counts*

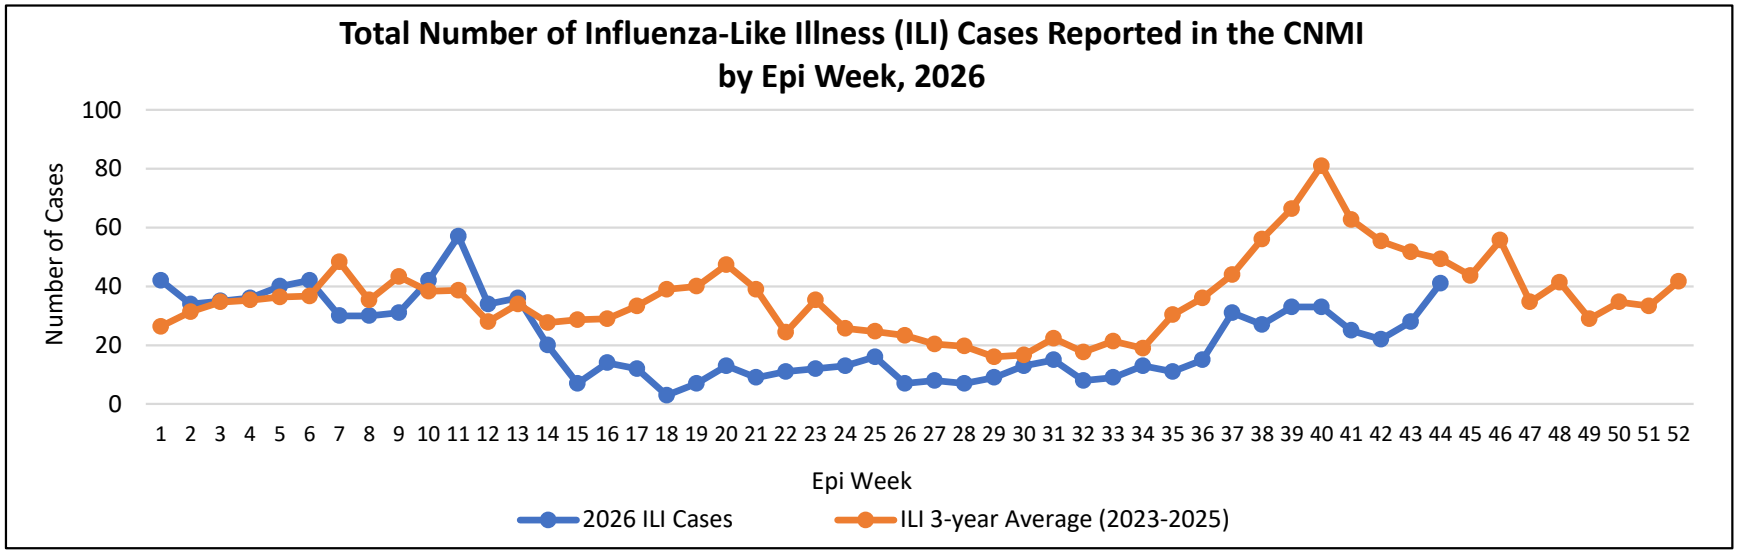

Antimicrobial Resistant (AMR) Infections		
Organism	EW 44	2026 YTD Totals
MRSA	0	61
VRE	0	1
ESBL	2	103
CRE	0	1

CNMI Weekly Notifiable Disease Report for Select NNDs

EPI WEEK 44 **EPI WEEK DATE:** November 01, 2026 – November 07, 2026

In the table below, weekly and year to date counts are displayed for Epi Week 44 and 2026, respectively. Additionally, a 3-year weekly average is calculated for the same Epi Week from the previous 3 years (2023-2025) for comparison to the current week. Incidence rates are calculated for 2025 and 2026 using the estimated population for the CNMI from the U.S. Census Bureau.

Condition	Epi Week 44	2026 YTD	3-year weekly average counts	2026 YTD Incidence Rates*	2025 Incidence Rates*
Enteric Diseases:					
Campylobacter	0	32	2	63.0	37.3
Ciguatera fish poisoning	0	7	0	13.8	13.7
Salmonella	2	27	1	53.2	58.9
Environmental:					
Elevated Blood Lead Levels	0	2	0	3.9	2.0
Sexually Transmitted Infections:					
Chlamydia	2	145	5	285.5	371.0
Gonorrhea	2	13	0	25.6	35.3
Syphilis	0	16	0	31.5	33.4
Respiratory Infections:					
Influenza	24	427	-	840.8	1270.0
RSV	2	29	-	57.1	45.1
COVID-19	0	149	3	293.4	447.5
Tuberculosis:					
TB, Confirmed	0	13	0	25.6	35.3
TB, Under Investigation	0	9	0	17.7	5.9

*Rate per 100,000; Data are preliminary and subject to change. CNMI population estimates were determined using 2025 and 2026 Census International Database (https://www.census.gov/data-tools/demo/idb/#/country?YR_ANIM=2021&COUNTRY_YR_ANIM=2021&FIPS_SINGLE=CQ)

CNMI Weekly Prescription Drug Monitoring Program (PDMP) Report

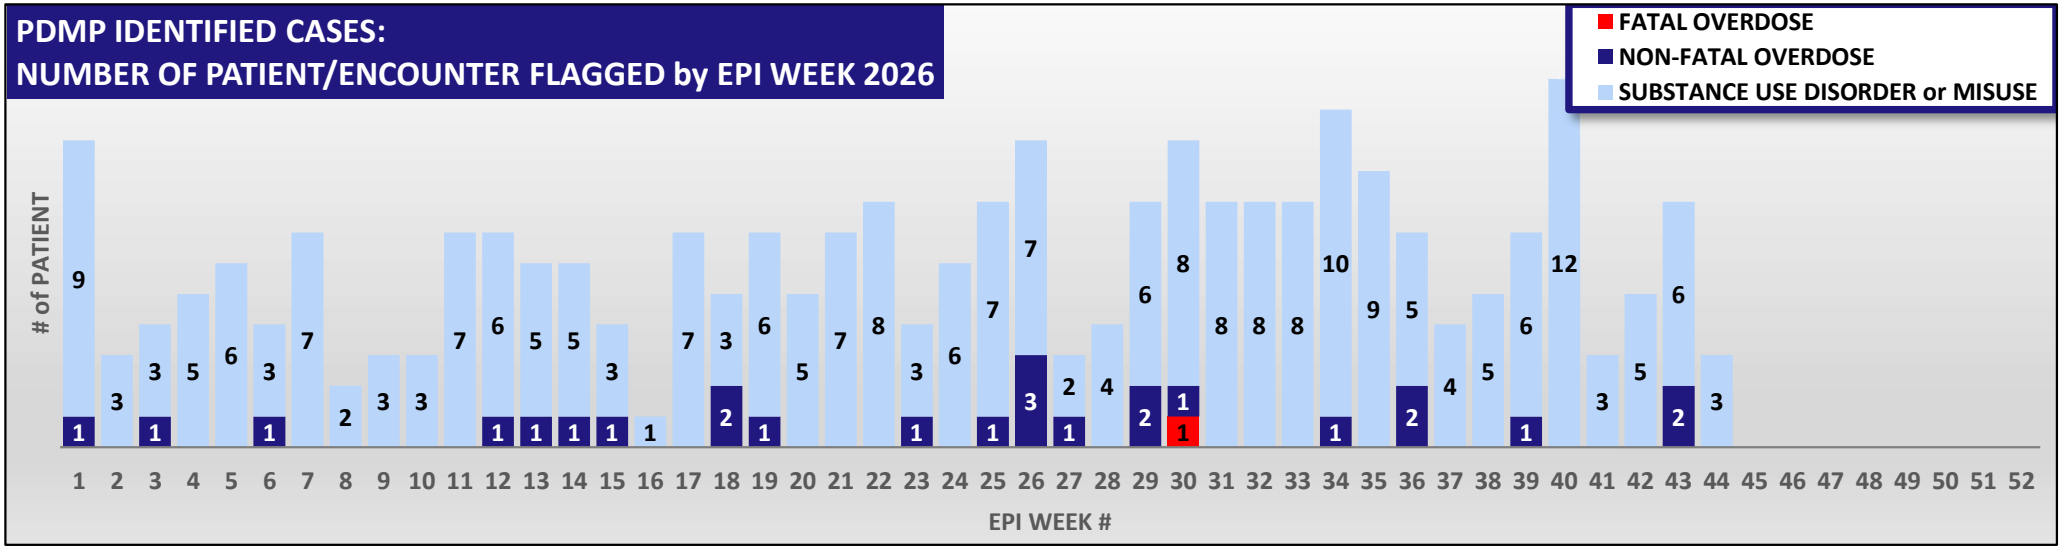

EPI WEEK 44| EPI WEEK DATE: NOVEMBER 1, 2026 – NOVEMBER 7, 2026

WEEKLY CASE COUNTS

POLYSUBSTANCE		OPIOID		STIMULANT		BENZODIAZEPINE		OTHER SUBSTANCE
OVERDOSE	MISUSE	OVERDOSE	MISUSE	OVERDOSE	MISUSE	OVERDOSE	MISUSE	OVERDOSE
0	2	0	0	0	3	0	0	0

NOTE: The encounters have been monitored since 2020. Some individuals might be involved in multiple cases or flagged multiple times for the same type of encounter in a single EPI week. The overdose Surveillance has expanded to include Stimulant and Polysubstance cases in 2021, Benzodiazepine cases in 2022. The Polysubstance cases are also counted under respective categories. Prior cases of any overdose related encounters might be duplicated under Other Substance Overdose category. Other Substance category analysis is solely depending on indications from the providers' notes. The substances reported are not verified by NDC number or DEA substance database. Substance use disorder counts are reflected in the misuse counts within the table.

PDMP IDENTIFIED CASES: NUMBER OF PATIENT/ENCOUNTER FLAGGED by EPI WEEK 2026

CASE: DEFINITION	
OVERDOSE	Injury to the body (poisoning) that happens when a drug is taken in excessive amounts. An overdose can be fatal or nonfatal, accidental or intentional.
POLY-SUBSTANCE	The use of more than one drug, also known as polysubstance use, is common. This includes when two or more are taken together or within a short time period, either intentionally or unintentionally. Intentional polysubstance use occurs when a person takes a drug to increase or decrease the effects of a different drug or wants to experience the effects of the combination. Unintentional polysubstance use occurs when a person takes drugs that have been mixed or cut with other substances, like fentanyl, without their knowledge. Whether intentional or not, mixing drugs is never safe because the effects from combining drugs may be stronger and more unpredictable than one drug alone, and even deadly. *For overdose Surveillance, Poly-Substance Use only includes encounters associated with Opioids, Stimulants, and/or Benzodiazepines.
MISUSE	The use of illegal drugs and/or the use of prescription drugs in a manner other than as directed by a doctor, such as use in greater amounts, more often, or longer than told to take a drug or using someone else's prescription.
OPIOID USE DISORDER STIMULANT USE DISORDER BENZODIAZEPINE USE DISORDER	A problematic pattern of opioid, stimulant, or benzodiazepine uses that lead to serious impairment or distress. Diagnosing OUD/SUD/BUD requires a thorough evaluation, which may include obtaining the results of urine drug testing and prescription drug monitoring program (PDMP) reports, when OUD/SUD/BUD is suspected. A diagnosis is based on specific criteria such as unsuccessful efforts to cut down or control use, or use resulting in social problems and a failure to fulfill obligations at work, school, or home, among other criteria.
SUSPECTED MISUSE	Any encounters that possibly leading to the above descriptions with such providers' comments as "requesting prescription refills (at emergency department)", "drug-seeking-behavior", and "frequent ER visitor for the same complaint for chronic pain and requesting 'stronger' medication". Also, cases where providers indicate there is possibility for misuse on the EHR system or when patients inform that they took Oxycodone (for example) and no PDMP data to support the patients' statement.

CNMI Weekly Health & Vital Statistics Report

REPORTING PERIOD: EPI YEAR 2026 as of EPI WEEK 44

This preliminary report on births and deaths provides statistics derived from daily birth and death registrations processed at the Health and Vital Statistics Office.

- **Number of births:** **7**(472)
- **Average:** **11**(per week)
- **Infections present and/or treated during pregnancy:**
  - Chlamydia: **0**(23)
  - Gonorrhea: **0**(0)
  - Syphilis: **0**(3)
  - Hepatitis B: **0**(3)
  - Hepatitis C: **0**(0)
  - COVID-19: **0**(0)
- **Substance use during pregnancy**:
  - Cigarette smoking: **1**(7)
  - Betelnut chewing: **2**(44)
  - Betelnut chewing + tobacco: **2**(39)
  - Alcohol use: **0**(1)
  - Drug use: (Cannabis, Crystal meth-Ice, Opioid, Others, etc.) **1**(6)
  - E-Cigarette use: **0**(3)
    - 3 months before pregnancy **0**(0)
    - During pregnancy **0**(3)
- **Maternal risk factors in pregnancy:**
  - Pre-pregnancy DM: **0**(12)
  - Gestational DM: **0**(62)
  - Pre-pregnancy HTN: **0**(14)
  - Gestational HTN: **0**(36)
- **Infant risk factors (Low survival births)**
  - Birth weight < 1500 grams: **0**(4)
  - Birth weight < 2500 grams: **2**(42)
  - Gestation age < 37 weeks: **1**(40)

- **Number of deaths:** **4**(248)
- **Average:** **6**(per week)
- **Number of deaths who received COVID-19 and Flu vaccine:**

Age range:	**< 5**	**≥ 5**	**12-17**	**18 & over**
N◦ of death	**0**(5)	**0**(0)	**0**(1)	**4**(242)
% COVID-19	**0%**	**0%**	**0%**	**74%**
% Flu Vaccine	**0%**	**0%**	**0%**	**0%**

Note: Received flu vaccine within ≤ 14 days before time of death.

- **Mortality Surveillance:** 4(248)
  - Non-communicable diseases: 1(167)
    - *Cancer related deaths* ***1****(49)*
    - *Tobacco related deaths* ***2****(28)*
  - Viral Respiratory Illnesses: **0**(4)
    - *Acute upper respiratory infections* ***0****(0)*
    - *Influenza and pneumonia* ***0****(3)*
    - *Other acute lower respiratory infections* ***0****(0)*
    - *COVID-19 or other contributing conditions*[1] ***0****(1)*
  - Fetal Deaths[2] **0**(4)
  - Infant Deaths: **0**(5)
  - Children (aged 1 - 4 years) Deaths: **0**(0)
  - Maternal Deaths: **0**(0)
  - Accident or Injury Related Deaths[3]: 0(15)
    - Drowning: **0**(3)
    - Suicide: **0**(3)
    - Assault: **0**(1)
    - Traffic fatality: **0**(5)
    - Substance Use: **1**(11)
    - Poisoning: **0**(0)

[1] Other significant condition contributing to death but NOT resulting in the underlying cause.[2] Fetal deaths = Fetus weighed ≥ 350 grams, or fetal demise > 20 weeks of completed gestation.

[3] Accident or Injury related deaths = Manner of death beyond Natural Causes: accidental deaths (traffic and drowning), suicide, drug overdose, and poisoning.
